DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 2. Claims 1, 4, 6, 7, 9, 10 and 12 are rejected under 35
 U.S.C. 103(a) as being unpatentable over one of U.S. Patent
 Number 4,834,393 (Feldi) or French Patent Number 2,594,037
 (Musslin) and either in view of U.S. Patent Number 5,077,870
 (Melbye et al., hereinafter Melbye), U.S. Patent Number
 6,401,997 (Smerdon, Jr., hereinafter Smerdon) and applicant's admission of prior art (AAPA).

Regarding claims 1, 4, 6, 7, 9, 10 and 12, Feldi discloses the combination of a tennis racquet equipped with a ball-retrieving attachment attached to the shoulder of a racquet wherein the ball-retrieving attachment can be a hooked fastener material such as $Velco^{TM}$.

Musslin discloses another tennis racket having a hook fastener 3,4 configured to engage with the covering of the tennis ball. Musslin further discloses that "forms, dimensions and positions of the different elements, and the type of material used for the hooks could vary (*change*) within certain limits, without changing the general conception of the described

Art Unit: 3711

invention" (last paragraph at page 3 of 4 from the English translation).

Melbye teaches that VelcroTM and ScotchmateTM were artrecognized equivalents in their use as hook-and-loop fasteners
in the racquet art at the time of the invention. See column 1,
lines 15 et seq. It would have been obvious to substitute a
ScotchmateTM fastener in either the Feldi or Musslin racquet
since Melbye teaches the equivalence of VelcroTM and ScotchmateTM
fasteners and the selection of any of these known materials to
form the fastener would be within the level of ordinary skill in
the art.

Further, while it is noted here that none of Feldi, Musslin or Melbye discloses the recited hook size parameters such as monofilament diameter, hook height, hook width or hook depth, it is also noted that Smerdon teaches the use of hook-and-loop fasteners to removably attach a beverage tube to the side of a bicycle handlebar stem. Moreover, Smerdon discloses that those hook-and-loop fasteners should maintain good adhesion in wet and warm condition and examples of such fasteners are the ScotchmateTM SJ3526 fasteners. See the bridging paragraph between columns 11-12.

It further should be noted that tennis is generally considered to be an outdoor sport. In fact, among the sports'

Art Unit: 3711

most famous tennis tournaments include Wimbledon and the U.S. Open, both of which are outdoor events that are played in wet and warm conditions. Wimbledon starts in the early summer in England and the tournament is well-known for its hot, wet and damp conditions; the U.S. Open occurs at the end of the summer tennis season in Flushing, New York and it is known for its hot and humid conditions.

Therefore, given the facts that (1) Feldi, Musslin and Melbye teach the concept of using hook-and-loop fasteners such as VelcroTM or ScotchmateTM with tennis racquets to retrieve grounded tennis balls; (2) tennis is often played in wet and warm conditions; and, (3) Smerdon explicitly discloses the preference of ScotchmateTM SJ3526 fasteners for their strong adhesive performance in wet and warm conditions, it would have been obvious to one of ordinary skill in the art to use ScotchmateTM SJ3526 fasteners in either the Feldi or Musslin racquets as modified above for the purpose recognized by Smerdon as discussed above.

Regarding the exact specifications of the ScotchmateTM SJ3526 fasteners, AAPA discloses that ScotchmateTM SJ3526 fasteners are in fact the preferred fasteners of choice and therefore such a substitution would naturally meet the disclosed

Art Unit: 3711

dimensions of hook width, depth, diameter and density. See AAPA at page 5, lines 9-17 of the instant specification.

With further regard to claim 1, Feldi (Figure 1) and Musslin (Figure 3) show the racquet in tangential contact with a tennis ball.

With further regard to claim 10, although Feldi intends to provide an entirely new covering on a tennis ball, he also notes that it is old and well-known in the tennis art to pick up a standard tennis ball with a hook material affixed to the end of a tennis racquet. See column 1, lines 15-25. Further, as Musslin does not disclose the concept of covering the tennis balls with a different material, the Musslin racquet is considered to be used with standard tennis balls.

3. Claims 8, 11 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feldi or Musslin in view of Melbye, Smerdon and AAPA as applied above and further in view of U.S. Patent Number 4,993,712 (Urwin).

Regarding claims 8, 11 and 13-15, it would have been obvious to one of ordinary skill in the art to place the ball-retrieving attachment between the three and nine o'clock positions of either the Feldi or Musslin racquet as modified above in view of Urwin who teaches at column 4, lines 8-13 that a ball-retrieving attachment comprised of hook-and-loop

Application/Control Number: 10/635,873

Art Unit: 3711

fasteners can be placed anywhere along the outer surface of the racquet frame.

Page 6

Double Patenting

4. Claims 1, 4 and 6-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of co-pending Application No. 09/655,743. Although the conflicting claims are not identical, they are not patentably distinct from each other because the same essential limitations of a specific hooked fastener material attached to the shoulder of a racquet are being claimed.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

5. Applicant's arguments with respect to claims 1, 4 and 6-15 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/635,873 Page 7

Art Unit: 3711

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raleigh Chiu whose telephone number is (571) 272-4408. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich, can be reached on (571) 272-4415.

The fax number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
